CircularChem Showcase Poster Competition

27th-29th March, Loughborough University

We are excited to announce a poster competition as part of the CircularChem Showcase! This is a great opportunity to build on our interdisciplinary research community and to discover more about the richness and variety of projects within the programme.

Specifically, we would like to invite all early career researchers associated with the NICER programme including doctoral candidates to present their recent research progress, outcomes and anticipated impact. These posters will form a part of the in-person exhibition at the Showcase.

Posters will be judged according to the following criteria:

- Scientific novelty and excellence
- Visual appeal (e.g., readability, visual balance between text, figures and tables)
- Clear, concise presentation and comprehensibility to a non-expert audience
- Clear statement of wider impact beyond scientific publication.

Competition entrants should note the following:

- Posters must relate to an aspect of the entrant's doctoral research.
- Your poster must not have been submitted to a previous competition.

- Each entrant can submit only one poster.
- Posters must be printed at A1 size. We are unable to accept soft copies.
- Posters can be landscape or portrait orientation.
- It is the responsibility of competition entrants to ensure that any images used in their poster are not copyrighted.

RSC Sustainability have kindly agreed to sponsor a poster prize for the best contribution. The competition will be judged by a panel drawn from the CircularChem Centre's research community, and winners will be announced at the Showcase on 28th March.

If you have not yet registered to attend the Showcase, please do so [here](#).

Please contact the CircularChem Team if you have any further questions.
